

FALMOUTH TOWN HALL

Falmouth, MA

The Town of Falmouth expanded its Town Hall Building structure with a two-story addition that included two wood framed roof dormers and a lavatory room. Coastal Engineering Co., Inc. performed a structural engineering evaluation of the existing structure; prepared preliminary plans for the proposed renovations and improvements; and developed a floor framing scheme. We also partnered with the design team to develop an economical structure for the proposed facility addition.

SERVICES

- Existing conditions assessment
