FREEMAN'S WAY DRAINAGE IMPROVEMENT

Town of Brewster, MA

The Town of Brewster DPW engaged Coastal Engineering Co. to design improvements to stormwater drainage facilities on Freeman's Way. The road grading was such that stromwater was draining off the roadway onto private property not designated for this purpose. The improvements included installation of catch basins and leaching structures along the roadway to intercept the stromwater runoff for direct percolation into the ground.

SERVICES

- Drainage improvement plans
- Permitting under NHESP
- Construction phase engineering services
