

# HOUSE RELOCATION

Truro, MA

The project involved the relocation of a waterfront home in response to rapid coastal erosion. The house, located north of Ballston Beach in the town of Truro, was perched high up on an eroding coastal bluff and was moved to a safer location landward and downhill from its previous location.

The project involved relocation of the existing dwelling to a new foundation, and construction of new driveways for the subject and abutting properties on the environmentally sensitive landform. The regulatory review for the proposed house move included acquiring permits from local, state and federal agencies.
