

SCITUATE LIGHTHOUSE

Scituate, MA

Coastal Engineering Co. worked with Spencer Preservation Group to address the necessary repairs and upgrades to stabilize and restore the historic Scituate Lighthouse. As part of the work, Coastal conducted site assessments to review the existing condition of the structural elements of the lighthouse, including the exterior brick, interior stair structure, and the top lamp room area. Coastal then advised on the condition of these structural elements relative to immediate/emergency action and for long-term restoration, provided structural engineering design and plans, and performed construction contract administration.

SERVICES

- Existing conditions assessment and report
- Engineering design services for the emergency lamp room protection or removal
- Lighthouse restoration design and construction contract administration
